

ICEDyn 2013

SPECIAL SESSIONS

Keynotes

Session	Title	Speaker's name	Speaker's institution	ID
Keynote 01	Operational Modal Analysis	Rune Brincker	Aarhus University	125
Keynote 02	On the Renewed Interest for the Wave Propagation Approach to Structural Dynamics	José Roberto de França Arruda	Computational Mechanics Department University of Campinas	124
Keynote 03	Spatial Information in Autonomous Modal Parameter Estimation	Randall J. Allemang	School of Dynamic Systems College of Engineering and Applied Science University of Cincinnati	123
Keynote 04	Regular and chaotic dynamics of flexible plates	Awrejcewicz	Technical University of Lodz, Department of Automation and Biomechanics	1

Accepted abstracts

Session: Sound and Vibration Generated by Moving Loads

Developer: Dr Piotr Koziol

Session	Title	Speaker's name	Speaker's institution	ID
Special session K01	Signal analysis for a modulated sound source in a closed space as an initial approach to vehicle induced noise investigation	Andrzej Blazejewski	Koszalin University of Technology, Institute of Technology and Education	116
Special session K03	Vibrations of the Euler-Bernoulli beam resting on a nonlinear foundation	Piotr Koziol	Koszalin University of Technology, Department of Civil and Environmental Engineering	118
Special session K04	Nonlinear response of a beam to moving load	Piotr Koziol	Koszalin University of Technology, Department of Civil and Environmental Engineering	119
Special session K06	FEM analysis and a coiflet approximation of a beam response to moving load	Miguel M. Neves	Institute of Mechanical Engineering (IDMEC), Instituto Superior Técnico, Technical University of Lisbon, Lisbon, Portugal	121
Special session K07	Wave Propagation in Catenaries Subjected to Moving Loads	Roman Bogacz	Krakow University of Technology Faculty of Civil Engineering	122
Special session K08	Influence of Sleepers Shape and Fastening System on Wheel -Rail Contact Dynamics	Roman Bogacz	Krakow University of Technology, Faculty of Civil Engineering, ul. Warszawska 24, 31-155 Kraków, and Warsaw University of Technology, The Faculty of Automotive and Construction Machinery Engineering ul. Narbutta 84, 02-524 Warsaw, Poland	96

Session: Smart materials in Structural Dynamics**Developer:** Valder STEFFEN, Jr and Domingos A. RADE

Session	Title	Speaker's name	Speaker's institution	ID
Special session S05	Control of Limit Cycle Oscillation in a Three-Degree of Freedom Airfoil Section Using Fuzzy Takagi-Sugeno	Luiz Carlos Sandoval Goes	ITA Aeronautical Institute of Technology	73
Special session S06	Modeling of a Piezoelectric Energy Harvester with varying rectangular cross-section	Carlos De Marqui Junior	Department of Aeronautical Engineering, Engineering School of Sao Carlos, USP	102
Special session S08	Uncertainty quantification of aircraft modal analysis using perturbation technique in the stochastic finite element method	Airton Nabarrete	Instituto Tecnológico de Aeronáutica	72
Special session S09	Reliability Analysis in Actively Controlled Smart Structures	Domingos Alves Rade	Federal University of Uberlandia - UFU	79
Special session S10	Study of Complex Stiffness in Shape Memory Alloy Coil Actuator for Control Mechanical Systems	Antônio Almeida Silva	Universidade Federal de Campina Grande	46
Special session S11	Experimental study of a rotor-bearing vibration control system based on fuzzy controller and shape memory alloy actuators	Jader Morais Borges	Federal University of Campina Grande, Department of Mechanical Engineering	51
Special session S12	SMA two-bar truss control using time-delayed feedback method	Aline Souza de Paula	Universidade de Brasília	103
Special session S13	Probabilistic Neural Network and Fuzzy Cluster Analysis Methods Applied to Impedance-Based SHM for Damage Classification	Valder Steffen Jr	Federal University of Uberlândia ; School of Mechanical Engineering	104
Special session S15	Dynamical jumps and energy dissipation in a shape memory alloy oscillator	Aline Souza de Paula	Universidade de Brasília	105

Session: Structural Damage Identification Methods**Developer:** J. V. Araujo dos Santos, H. M. R. Lopes and P. Moreno-García

Session	Title	Speaker's name	Speaker's institution	ID
Special	Structural health monitoring under non-linear	Jyrki Kullaa	Aalto University	32

Session	Title	Speaker's name	Speaker's institution	ID
session V01	environmental or operational influences			
Special session V03	Damage detection in CFRP plates using Spectral Entropy	Enrique Castro	Department of Applied Physics. Universidad Politécnica de Cartagena	107
Special session V05	Sensor Placement Optimisation using a Bee Swarm Algorithm	Keith Worden	University of Sheffield	109
Special session V06	Automated recognition of damage location using statistical and vizual methods	Gilbert-Rainer GILLICH	“Eftimie Murgu” University of Resita	110
Special session V07	Effect of severe corrosion upon natural frequencies of beam-like structures	GILLICH Gilbert-Rainer	“Eftimie Murgu” University of Resita	111
Special session V08	Localization of transversal cracks in sandwich beams and evaluation of their severity	GILLICH Gilbert-Rainer	“Eftimie Murgu” University of Reșița	112
Special session V10	Crack detection using vibro-modulation: A time–frequency approach based on Zhao-Atlas-Marks (ZAM) distribution	Dr Leontios Hadjileontiadis	Aristotle University of Thessaloniki, Dept. of Electrical & Computer Engineering	114
Special session V11	A substructure based approach for detecting and locating damages in mechanical systems	G. Gautier	ENI Val de Loire, Université François Rabelais de Tours	115
Special session V12	Damage quantification in beams using multiobjective optimization	Araújo dos Santos	IST	132
